Replacement Portfolios

Dispatchability

Emissions	Current Planning Reserve Margin	Winter & Summer Reserve Margin	Enhanced Reserve Margin (Local w/ Higher Energy Duration)
Higher Carbon Emissions	Thermal PPAs, solar and storage (A)	Non-service territory gas peaking (no early storage) (B)	Natural gas dominant (CC) (C)
Mid Carbon Emissions	No new thermal resources; solar dominant w/ storage (D)	Thermal PPAs plus storage and solar (E)	Local gas peaker, plus solar and storage (F)
Low Carbon Emissions	Solar dominant w/ storage, plus retire Sugar Creek (G)	All renewables and storage, plus retire Sugar Creek (Portfolio 7) (H)	New H2-enabled peaker plus solar and storage, plus SC conversion to H2 (Portfolio 7H) (I)

Sugar Creek is retained through modeling horizon

Sugar Creek Retires or converts to H2

Net Energy for Load and Seasonal Peak Load Summaries by Component across Scenarios

Notes:

"Base Load" refers to the load forecasts developed through core econometric modeling, inclusive of line losses

Electric Vehichle (EV) Load and Other Electification increase NIPSCO's load obligation

Distributed Energy Resources (DERs) decrease NIPSCO's load obligation

RFP Tranche Summaries

Note: A tax equity partnership was assumed for renewable projects to take advantage of the production tax credit (wind) and the investment tax credit (solar). This adjustment to NIPSCO's capital contribution is reflected in the financial output details.

Scenario Name	Federal Tech. Incentives
Reference Case	2-year ITC extension (solar); 1-year PTC extension (60%)
Status Quo Extended	No change to current policy
Aggressive Environmental Regulation	5-year ITC extension (solar) plus expansion to storage; 3-year PTC extension (60%)
Economy-Wide Decarbonization	10-year ITC extension (solar) plus expansion to storage; 10-year PTC extension (60%);

Notes:
ITC = Investment Tax Credit; PTC = Production Tax Credit
Assumptions are shown for the eligible tax credit in the year a project commences commercial operation, assuming any necessary safe harboring is met.
The PTC is currently $25/MWh (paid over the first 10 years of operation) and anchored to inflation. The table indicates the percentage of this total value.
Storage facilities need to predominently charge from renewable energy for the first five years of their operational life to qualify for the ITC under current law. The AER and EWD scenarios extend the ITC to stand-alone storage.
