

Inspections & Testing

NIPSCO is required to conduct regular routine maintenance inspections and testing of our natural gas meters and piping to ensure proper system operation and public safety.

Our meter inspections are completed by NIPSCO contractors.*

*The technician will perform a safety inspection and a visual corrosion inspection of your meter. There is no charge for this inspection.

Unable to access your meter

If we are unable to access your gas meter, you will receive a communication about scheduling an appointment to complete your meter inspection from one of our two contractors.

Common reasons we could not access your gas meter:

- Blocked gas meters
- Pets
- A locked gate and/or a solid fence
- Solid ice covering the meter and/or compact snow

Visit our website today for more information on our gas meter inspection program.
