2023 Statistical Analysis

1.0 INTRODUCTION

On behalf of Northern Indiana Public Service Company LLC (NIPSCO), WSP USA Inc. (WSP), prepared this 2023 Annual Groundwater Monitoring and Corrective Action Report (2023 Annual Report) for the Bailly Generating Station (BGS, Bailly) coal combustion residuals (CCR) surface impoundment Secondary 1 (the CCR Unit) located at 246 Bailly Station Road in Chesterton, Porter County, Indiana (Latitude 41° 38' 40" N and Longitude 87° 05' 20" W, see Figure 1). Secondary 1 is an approximately three-acre, incised surface impoundment that is lined with a chlorosulfonated polyethylene "Hypalon" membrane (see Figure 2). WSP prepared the 2023 Annual Report in accordance with 40 Code of Federal Regulations (CFR) Parts 257 and 261, "Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals From Electric Utilities; Final Rule" (CCR Rule), as amended, and corresponding regulations under 329 Indiana Administrative Code (IAC) 10-9-1.

The CCR Unit is currently in Assessment Monitoring pursuant to 40 CFR §257.95. Routine monitoring activities performed during the reporting period include inspection of wells for integrity and security, measurement of groundwater levels prior to sample collection to assess groundwater flow direction, and collection of samples for laboratory analysis.

In conformance with the applicable requirements of 40 CFR §257.90(e)(1) through (5) and corresponding State of Indiana requirements, the 2023 Annual Report:

- Documents the status of the groundwater monitoring and corrective action program
- Provides figures showing the CCR Unit, monitoring well locations, and groundwater flow direction(s)
- Summarizes key CCR Rule groundwater activities completed during calendar year 2023
- Includes CCR Rule groundwater monitoring data obtained in calendar year 2023
- Describes any problems encountered during the monitoring activities
- Discusses actions taken to resolve the problems, if applicable
- Provides key activities for the upcoming year.

2.0 GROUNDWATER MONITORING AND CORRECTIVE ACTION PROGRAM OVERVIEW OF CURRENT STATUS

Starting in 2016 following the installation of a 40 CFR §257.91-compliant groundwater monitoring system (Table 1) and throughout calendar year 2017, WSP collected background groundwater samples and performed Detection Monitoring at the CCR Unit pursuant to the requirements of 40 CFR §257.93-94. Due to the identification of statistically significant increases (SSIs), NIPSCO established an Assessment Monitoring program in April 2018 pursuant to the requirements of 40 CFR §257.95. In 2018, WSP performed the first and second Assessment Monitoring events. Following the first Assessment Monitoring event, including verification sampling, NIPSCO posted a notification in the publicly accessible website of detections of 40 CFR Part 257 Appendix IV parameters downgradient of Secondary 1 above groundwater protection standards (GWPS). Consequently, NIPSCO initiated the assessment of corrective measures (ACM) process in December 2018. WSP performed subsequent monitoring events including:

- Third and fourth Assessment Monitoring events in 2019

- Fifth and sixth Assessment Monitoring events in 2020
- Seventh and eighth Assessment Monitoring events in 2021
- Ninth and tenth Assessment Monitoring events in 2022
- Eleventh and twelfth Assessment Monitoring events in 2023

The eleventh and twelfth Assessment Monitoring events were completed in May/June and November 2023. The groundwater elevations recorded during the May/June and November events are provided in Table 2, and the groundwater elevation contours are presented in Figures 3 and 4, respectively. The sampling dates, number of groundwater samples collected from each background and downgradient well, and the purpose of sampling associated with the eleventh and twelfth Assessment Monitoring events are provided in Table 3. The 2023 analytical results are presented in Table 4. Secondary 1 began and ended the current annual reporting period in Assessment Monitoring pursuant to §257.95. No statistically significant levels (SSLs) of Appendix IV constituents were identified in 2023.

On behalf of NIPSCO, WSP completed the assessment of corrective measures and prepared the ACM Report in May 2019. In addition, NIPSCO/WSP are working with Indiana Department of Environmental Management (IDEM) to develop and refine a closure design for all the BGS CCR Rule regulated impoundments. Concurrent with the closure design activities, WSP is continuing to evaluate the feasibility and design of potential groundwater remedial alternatives in accordance with the provisions of 40 CFR §259.97(a). Reflecting the work with IDEM and evolution of a final closure design, on behalf of NIPSCO, WSP prepared the ACM Addendum #1 Report in June 2022. A remedy has not yet been selected pending additional feedback from IDEM, finalization of the closure design, the collection and evaluation of additional information relative to remedy alternatives, and discussions with and preliminary input from an adjacent property manager; therefore, no remediation activities were performed in 2023. At least 30 days prior to the selection of remedy, NIPSCO will schedule a public meeting to present the proposed remedial approach for public comment.

2.1 Key Actions Completed - 2023

NIPSCO completed the following key actions relative to CCR Rule groundwater monitoring at Secondary 1 during calendar year 2023:

- Preparation of the 2022 Groundwater Monitoring and Corrective Action Annual Report in January 2023 (2022 Annual Report, WSP 2023) (40 CFR §257.90(e))
- Evaluation of the results of the tenth Assessment Monitoring event in March 2023 (40 CFR §257.95)
- Preparation of the eighth semi-annual Selection of Remedy Progress Report in April 2023 (40 CFR §257.97)
- Performance of the eleventh Assessment Monitoring event in May/June 2023 (40 CFR §257.95)
- Preparation of the ninth semi-annual Selection of Remedy Progress Report in October 2023 (40 CFR §257.97)
- Evaluation of the results of the eleventh Assessment Monitoring event in October 2023 (40 CFR §257.95)
- Performance of the twelfth Assessment Monitoring event in November 2023 (40 CFR §257.95)

2.2 Monitoring System Modifications

The groundwater monitoring system did not require any modification in 2023 (see Figure 2). Attached Table 1 provides a summary of the well rationale/purpose and date of installation. An overview of the groundwater monitoring network is provided in the embedded table below.

| Background Monitoring Wells | Downgradient Monitoring Wells |
|-----------------------------|-------------------------------|
| GAMW-01, GAMW-01B | GAMW-02, GAMW-03, GAMW-04 |

2.3 Background Monitoring (2016 to 2017)

Per the requirements of 40 CFR §257.93-94, WSP collected eight independent background groundwater samples from each background and downgradient well between July 2016 and August 2017. WSP used the results of the background monitoring phase to develop appropriate, statistically valid background values for each constituent/monitoring well. WSP submitted the samples to a contract laboratory, in accordance with chain of custody and quality assurance/quality control procedures, for analysis of 40 CFR Part 257 Appendix III and Appendix IV constituents. In addition, WSP personnel measured field water quality parameters including specific conductance, temperature, dissolved oxygen, turbidity, oxidation-reduction potential, and pH. The background data set is included in the 2017 CCR Annual Groundwater Monitoring and Corrective Action Report, dated January 31, 2018 (2017 Annual Report, Golder 2018).

WSP performed a periodic update of background datasets, which includes incorporation of additional background data, to improve statistical power and accuracy by providing a more conservative estimate of the true background populations. The CCR Rule Groundwater Monitoring Program Implementation Manual (GMPIM, Golder 2017) allows for the statistical limits to be updated after four to eight new measurements are available (i.e., every two to four years of semi-annual monitoring). WSP incorporated new data into the background dataset, updating the GWPS, in February 2020 and February 2022.

2.4 Detection Monitoring

WSP performed the first Detection Monitoring event in October 2017, followed by a statistical evaluation and data analysis in January 2018. WSP collected groundwater samples from Secondary 1 background and downgradient monitoring wells for analysis of Appendix III constituents per 40 CFR §257.94 and included the results in the 2017 Annual Report. Following receipt and validation of laboratory results, WSP evaluated the results of the first Detection Monitoring event to compare the concentration of Appendix III constituents relative to facility background concentrations. Using Sanitas™ software, WSP pooled the background data to calculate prediction limits and compared the October 2017 results to the calculated prediction limits to determine SSIs. Due to the identification of SSIs, NIPSCO established an Assessment Monitoring program in April 2018.

2.5 Assessment Monitoring

WSP performed the first Assessment Monitoring event (i.e., Assessment and Verification sampling) in March and April 2018, followed by a statistical evaluation and data analysis in August 2018. In March 2018, WSP collected groundwater samples from each background and downgradient monitoring well for analysis of Appendix IV constituents per 40 CFR §257.95. In April 2018, groundwater samples were collected at the downgradient monitoring well locations and analyzed for Appendix III and detected Appendix IV constituents per 40 CFR §257.95. In September 2018, WSP developed GWPS against which to compare the Assessment Monitoring

results. Following receipt and validation of laboratory results, WSP evaluated the Appendix IV constituent results relative to CCR Unit-specific GWPS (Table 5). At the time of the statistical evaluation the GWPS was the higher value of either the Maximum Contaminant Level (MCL) or the CCR Unit-specific background concentration for each analyte calculated using a tolerance/prediction limit procedure in accordance with 40 CFR §257.95(h)(2). Results from the downgradient monitoring wells were evaluated by comparing the lower confidence limit (LCL) to the CCR Unit-specific GWPS for each Appendix IV analyte at each well. If the LCL exceeds the GWPS, there is statistical evidence of an SSL. WSP identified SSLs for thallium at well GAMW-03 and cadmium at GAMW-04 in September 2018 and initiated the assessment of corrective measures in December 2018.

WSP performed additional Assessment Monitoring events at Secondary 1 by collecting groundwater samples from each background and downgradient monitoring well per 40 CFR §257.95 including:

- Second Assessment Monitoring Event – October 2018: WSP performed the second Assessment Monitoring event by collecting groundwater samples for analysis of Appendix III and detected Appendix IV constituents. WSP performed the statistical evaluation of the analytical results of the second Assessment Monitoring event in January 2019. The results confirmed the SSLs for thallium at well GAMW-03 and cadmium at well GAMW-04. The results from the first and second Assessment Monitoring events are included in the 2018 Annual Groundwater Monitoring and Corrective Action Report, dated January 31, 2019 (2018 Annual Report, Golder 2019).
- Third Assessment Monitoring Event – April 2019: WSP performed the third Assessment Monitoring event by collecting groundwater samples for analysis of Appendix III and Appendix IV constituents. WSP performed the statistical evaluation of the analytical results of the third Assessment Monitoring event in August 2019. The results confirmed the SSLs for thallium at well GAMW-03 and cadmium at well GAMW-04.
- Fourth Assessment Monitoring Event – October 2019: WSP performed the fourth Assessment Monitoring event by collecting groundwater samples for analysis of Appendix III and detected Appendix IV constituents. WSP performed the statistical evaluation of the analytical results of the fourth Assessment Monitoring event in February 2020. The results confirmed the SSLs for thallium at well GAMW-03 and cadmium at well GAMW-04. The results from the third and fourth Assessment Monitoring events are included in the 2019 Annual Groundwater Monitoring and Corrective Action Report, dated January 31, 2020 (2019 Annual Report, Golder 2020).
- Fifth Assessment Monitoring Event – April 2020: WSP performed the fifth Assessment Monitoring event by collecting groundwater samples for analysis of Appendix III and Appendix IV constituents. WSP performed the statistical evaluation of the analytical results of the fifth Assessment Monitoring event in August 2020. The results confirmed the SSLs for thallium at well GAMW-03 and cadmium at well GAMW-04.
- Sixth Assessment Monitoring Event – November 2020: WSP performed the sixth Assessment Monitoring event by collecting groundwater samples for analysis of Appendix III and detected Appendix IV constituents. WSP performed the statistical evaluation of the analytical results of the sixth Assessment Monitoring event in February 2021. The results confirmed the SSLs for thallium at well GAMW-03 and cadmium at well GAMW-04. The results from the fifth and sixth Assessment Monitoring events are included in the 2020 Groundwater Monitoring and Corrective Action Report, dated January 31, 2021 (Golder 2021).
- Seventh Assessment Monitoring Event – May 2021: WSP performed the seventh Assessment Monitoring event by collecting groundwater samples for analysis of Appendix III and Appendix IV constituents. WSP

performed the statistical evaluation of the analytical results of the seventh Assessment Monitoring event in September 2021. The results confirmed the SSLs for thallium at well GAMW-03 and cadmium at well GAMW-04.

- Eighth Assessment Monitoring Event – October 2021: WSP performed the eighth Assessment Monitoring event by collecting groundwater samples for analysis of Appendix III and detected Appendix IV constituents. WSP performed the statistical evaluation of the analytical results of the eighth Assessment Monitoring event in February 2022. The results confirmed the SSL for cadmium at well GAMW-03; however, thallium at well GAMW-04 was no longer identified as an SSL. Further evaluation identified a statistically significant decreasing trend for thallium in this well with the upper confidence band below the GWPS. The results of the seventh and eighth Assessment Monitoring events are included in the 2021 Groundwater Monitoring and Corrective Action Report, dated January 31, 2022 (Golder 2022).
- Ninth Assessment Monitoring Event – May-June 2022: WSP performed the ninth Assessment Monitoring event by collecting groundwater samples for analysis of Appendix III and Appendix IV constituents. WSP performed the statistical evaluation of the analytical results of the ninth Assessment Monitoring event in October 2022. The results confirmed the SSL for cadmium at well GAMW-03.
- Tenth Assessment Monitoring Event – October-November 2022: WSP performed the tenth Assessment Monitoring event by collecting groundwater samples for analysis of Appendix III and Appendix IV constituents. WSP performed the statistical evaluation of the analytical results of the tenth Assessment Monitoring event in March 2023. No SSLs were identified. The results of the ninth and tenth Assessment Monitoring events are included in the 2022 Groundwater Monitoring and Corrective Action Report, dated January 31, 2023 (WSP 2023).
- Eleventh Assessment Monitoring Event – May-June 2023: WSP performed the eleventh Assessment Monitoring event by collecting groundwater samples for analysis of Appendix III and Appendix IV constituents. WSP performed the statistical evaluation of the analytical results from the eleventh Assessment Monitoring event in October 2023. No SSLs were identified.
- Twelfth Assessment Monitoring Event – November 2023: WSP performed the twelfth Assessment Monitoring event by collecting groundwater samples for analysis of Appendix III and Appendix IV constituents. WSP will perform the statistical evaluation of the analytical results from the twelfth Assessment Monitoring event in March 2024.

The 2023 analytical laboratory reports are provided in Appendix A and Appendix B for the May/June and November 2023 results, respectively. The data usability assessment report is provided in Appendix C and the results from the statistical evaluations completed in February and October 2023 are attached in Appendix D.

2.6 Corrective Action

NIPSCO is evaluating the feasibility and design of the potential groundwater remedial alternatives presented in the ACM report (Golder 2019) and ACM Addendum #1 (Golder 2022). As discussed in the ACM and Addendum, NIPSCO plans to close these CCR Units by completing source removal and capping in accordance with 40 CFR §257.102. NIPSCO is currently working with IDEM to finalize the Closure Application.

In 2019, WSP identified changes in the groundwater flow direction because of the shutdown of coal-fired generating activities and consequent modification in operation of the impoundments. As a result, WSP updated

the groundwater monitoring network to adequately monitor groundwater quality at Secondary 1 and to allow for the collection and evaluation of additional information essential to the evaluation of the potential Corrective Measures alternatives.

In 2020 and 2021, WSP continued to sample and evaluate data from the updated monitoring well network consistent with 40 CFR §257.95. The additional data were presented in an addendum to the ACM (ACM Addendum #1, Golder 2022). Additionally, the ACM Addendum #1 1) provided further details of WSP's evaluation of the potential corrective measures for the CCR Units, 2) incorporated changes resulting from an enhanced final cover system design, and 3) reevaluated the potential Corrective Measures identified in the ACM based on their compatibility with the final closure design.

NIPSCO attended an in-person meeting with IDEM in mid-April 2022 to discuss aspects of the closure approach. Issues of review/discussion included CCR delineation and removal from certain CCR Units, excavation, and removal of source material and the underlying Hypalon and clay liner systems, the final cover system, and conceptual design, future operation, and maintenance of a post-closure stormwater collection and infiltration gallery. Based upon IDEM feedback, NIPSCO continues to refine the Closure Application. Additional feedback from IDEM may require modifications or refinement to the closure approach, post-closure water management plans, and the Closure Application, which will in turn potentially impact the ACM and selection of a groundwater Corrective Measure(s).

In addition to IDEM, another significant stakeholder in the groundwater ACM process is the National Park Service (NPS), the U.S. governmental organization responsible for the adjacent Indiana Dunes National Park (IDNP). In late November 2022, consistent with the desire to move the ACM process forward while soliciting feedback from key stakeholders, representatives of NIPSCO held a virtual meeting with representatives of NPS to provide a background on the Site, discuss historical and current groundwater conditions, outline the CCR Rule requirements for Corrective Action, and present an overview of alternatives under consideration along with potential off-Site impacts to IDNP. At NPS' request, information related to the ACM and Addendum was provided for technical review, and a follow up meeting was held at the site in March 2023.

In 2023, WSP will continue to collect and evaluate additional information relative to the potential Corrective Measures in the ACM, placing emphases on identifying critical data gaps, understanding and responding to newly gathered information on previous assumptions and/or conclusions, identifying and researching applicability of emerging technologies, and monitoring changing conditions and future plans for the Site and their impacts on the remedy process.

2.7 Statistical Evaluation

Methods used during this statistical evaluation are described in the GMPIM (Golder 2017), were certified by a qualified engineer in October 2017, and are summarized in this section. WSP utilized the Sanitas™ statistical analysis software package to complete this statistical evaluation.

2.7.1 Data Evaluation

After each monitoring event, WSP assessed the analytical data for outliers, anomalies, and trends that may be an indication of a sampling or analytical error. Outliers and anomalies are generally defined as inconsistently large or small values that can occur because of sampling, laboratory, transportation, or transcription errors, or even by chance alone. Significant trends may indicate natural geochemical variability, a source of systematic error, influence of an upgradient/off-site source, or an actual occurrence of CCR Unit influence upon groundwater

quality. Appropriate statistical methods are used to remove outliers from the database and manage trends with detrending routines, prior to the calculation of statistical limits. To assess the data for outliers, anomalies, and trends, WSP assessed the data using time vs. concentration graphs, and statistical routines included in the Sanitas™ statistical analysis software package. No new outliers were identified or removed from the data set since the 2022 Annual Report.

WSP evaluated the background data set for trends using Sanitas™ software (Appendix D). WSP will continue to monitor trends and apply detrending routines, if applicable, before using these data to calculate GWPS. WSP identified the following 40 CFR Part 257 Appendix IV parameter trends in background monitoring wells:

- Arsenic concentrations detected in groundwater samples collected from GAMW-01 show a decreasing trend; all background results are below the MCL, therefore, the GWPS is equal to the MCL. No detrending routines are required.
- Beryllium concentrations detected in groundwater samples collected from GAMW-01 show a decreasing trend; all background results are below the MCL, therefore, the GWPS is equal to the MCL. No detrending routines are required.
- Fluoride concentrations detected in groundwater samples collected from GAMW-01 and GAMW-01B show decreasing trends; all background results are below the MCL, therefore, the GWPS is equal to the MCL. No detrending routines are required.
- Lead concentrations detected in groundwater samples collected from GAMW-01 show an increasing trend; all background results are below the health-based standard, therefore, the GWPS is equal to the health-based standard. No detrending routines are required.
- Combined radium concentrations detected in groundwater samples collected from GAMW-01 show an increasing trend; all background results are below the MCL, therefore, the GWPS is equal to the MCL. No detrending routines are required.

2.7.2 Development of Groundwater Protection Standards

Pursuant to CFR §257.95(h), GWPS were developed for each of the Appendix IV analytes. The GWPS is set equal to the MCL or health-based standard or a limit based on background data, whichever is greater, as described in 40 CFR §257.95(h)(2). The CCR Rule and *Unified Guidance* provide two acceptable approaches for establishing a background-based GWPS (unless all values are non-detect, in which the background-based GWPS is set equal to the laboratory reporting limit (RL)); tolerance interval approach or prediction interval approach.

If the background dataset is normally or transformed normally distributed, the GMPIM states that the tolerance interval approach is used. The background-based GWPS will be based on a 95 percent coverage/95 percent confidence tolerance interval. If the background data are non-normal (even after transformation) than a non-parametric prediction interval approach is used.

As described in Section 2.3, WSP performed a periodic update of background datasets, which includes incorporation of additional background data, to improve statistical power and accuracy by providing a more conservative estimate of the true background populations. The GMPIM allows for the statistical limits to be updated after four to eight new measurements are available (i.e., every two to four years of semi-annual monitoring). WSP incorporated new data into the background dataset, updating the groundwater protection standards (GWPS), in February 2020 and February 2022. A summary of the GWPS is provided in Table 5.

2.7.3 Results of Appendix IV Downgradient Statistical Comparisons

An interwell statistical evaluation was used to identify SSLs. An interwell evaluation compares the most recent values from downgradient compliance wells to a background dataset composed of upgradient well data. Because the CCR Unit is in Assessment Monitoring, no statistical evaluations were conducted on Appendix III (Detection Monitoring) constituents.

For Assessment Monitoring the Unified Guidance recommends the confidence interval method to evaluate for potential exceedances or SSLs. Using confidence intervals, SSLs are identified by comparing the calculated confidence interval against the GWPS. A confidence interval statistically defines the upper and lower bounds of a specified population within a stipulated level of confidence. If the lower confidence limit exceeds the GWPS, there is statistical evidence that an SSL has been triggered.

Based on the comparisons outlined above, the results of the statistical analysis completed in March and October 2023 did not identify SSLs. The calculated confidence intervals are provided in Appendix D.

2.8 Problems Encountered and Follow-Up Corrective Actions

No problems were encountered in 2023.

3.0 KEY ACTIVITIES PROJECTED FOR 2024

During calendar year 2024, NIPSCO anticipates conducting the following key CCR Rule groundwater monitoring activities for Secondary 1:

- Prepare and submit the appropriate notifications according to the CCR Rule
- Continue semi-annual Assessment Monitoring groundwater sampling per CCR Rule requirements
- Continue to evaluate potential remedial alternatives, assess the impact(s) of IDEM feedback on impoundment closure design and associated groundwater remedy options, and prepare semi-annual reports describing the progress in selecting and designing the remedy
- Inspect and maintain the monitoring system including wells, pumps, and equipment.

Notes:

1) Per 40 CFR §257.93, WSP collected eight rounds of background data prior to October 17, 2017.

2) Prior to September 2019, monitoring wells GAMW-08 and GAMW-11 were considered part of the background monitoring well network. Due to changes in groundwater flow direction, these monitoring wells have been removed from the monitoring well network for Secondary 1.

RE: Project: Bailly Assessment
Pace Project No.: 50345179

Dear Mr. Haskins:

Enclosed are the analytical results for sample(s) received by the laboratory between May 18, 2023 and June 03, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:
• Pace Analytical Services - Indianapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tina Sayer

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50345179

Method: **EPA 9056**
Description: 9056 IC Anions
Client: NiSource_WSP Golder
Date: June 19, 2023

General Information:

35 samples were analyzed for EPA 9056 by Pace Analytical Services Indianapolis. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 736752

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 50345528002

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

- MS (Lab ID: 3380285)
 - Chloride
 - Sulfate
- MSD (Lab ID: 3380286)
 - Chloride
 - Sulfate

QC Batch: 736756

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 50345662001

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

- MS (Lab ID: 3380301)
 - Sulfate
- MSD (Lab ID: 3380302)
 - Sulfate

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50345179

Method: EPA 9056
Description: 9056 IC Anions
Client: NiSource_WSP Golder
Date: June 19, 2023

QC Batch: 737324

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 50345780001

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
• MSD (Lab ID: 3382917)
• Chloride

QC Batch: 738291

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 50346151001

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
• MSD (Lab ID: 3386874)
• Chloride

QC Batch: 739167

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 50346458001

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
• MS (Lab ID: 3390841)
• Chloride
• MSD (Lab ID: 3390842)
• Chloride

Additional Comments:

Analyte Comments:

QC Batch: 736752

E: Analyte concentration exceeded the calibration range. The reported result is estimated.
• MS (Lab ID: 3380285)
• Sulfate
• MSD (Lab ID: 3380286)
• Sulfate

QC Batch: 736756

E: Analyte concentration exceeded the calibration range. The reported result is estimated.
• MS (Lab ID: 3380301)
• Sulfate
• MSD (Lab ID: 3380302)
• Sulfate

QC Batch: 737759

E: Analyte concentration exceeded the calibration range. The reported result is estimated.
• MS (Lab ID: 3384522)
• Chloride
• MS (Lab ID: 3384524)
• Chloride
• MSD (Lab ID: 3384523)
• Chloride

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50345179

Method: EPA 6010
Description: 6010 MET ICP
Client: NiSource_WSP Golder
Date: June 19, 2023

General Information:

35 samples were analyzed for EPA 6010 by Pace Analytical Services Indianapolis. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 735690

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 50345183003

P6: Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

- MS (Lab ID: 3375776)
 - Calcium
- MSD (Lab ID: 3375777)
 - Calcium

QC Batch: 736789

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 50345453002

P6: Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

- MSD (Lab ID: 3380390)
 - Calcium

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50345179

Method: EPA 6010

Description: 6010 MET ICP

Client: NiSource_WSP Golder

Date: June 19, 2023

QC Batch: 738597

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 50346288001,50346299003

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

- MS (Lab ID: 3388828)
 - Calcium

P6: Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

- MS (Lab ID: 3388830)
 - Calcium
- MSD (Lab ID: 3388831)
 - Calcium

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50345179

Method: EPA 6020
Description: 6020 MET ICPMS
Client: NiSource_WSP Golder
Date: June 19, 2023

General Information:

35 samples were analyzed for EPA 6020 by Pace Analytical Services Indianapolis. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 200.2 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

Analyte Comments:

QC Batch: 738629

C0: Result confirmed by second analysis.

- FB-05-060223 (Lab ID: 50346392003)
- Barium

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50345179

Method: EPA 7470
Description: 7470 Mercury
Client: NiSource_WSP Golder
Date: June 19, 2023

General Information:

35 samples were analyzed for EPA 7470 by Pace Analytical Services Indianapolis. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 7470 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50345179

Method: **SM 2540C**

Description: 2540C Total Dissolved Solids

Client: NiSource_WSP Golder

Date: June 19, 2023

General Information:

35 samples were analyzed for SM 2540C by Pace Analytical Services Indianapolis. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QC Batch: 737709

R1: RPD value was outside control limits.

- DUP (Lab ID: 3384353)
- Total Dissolved Solids

Additional Comments:

Analyte Comments:

QC Batch: 735791

PL: The minimum mass of dried residue of 2.5 mg could not be obtained using the routine sample volume of 100 mL.

- FB-01-051823 (Lab ID: 50345352004)
- Total Dissolved Solids

QC Batch: 736530

PL: The minimum mass of dried residue of 2.5 mg could not be obtained using the routine sample volume of 100 mL.

Project: Bailly Assessment

Pace Project No.: 50345179

QC Batch: 737713 Analysis Method: SM 4500-H+B

QC Batch Method: SM 4500-H+B Analysis Description: 4500H+B pH

Laboratory: Pace Analytical Services - Indianapolis

Associated Lab Samples: 50345662004, 50345662005

SAMPLE DUPLICATE: 3384355

| Parameter | Units | 50345662004 Result | Dup Result | RPD | Max RPD | Qualifiers |
|--------------------|------------|-----------------------|---------------|-----|------------|------------|
| pH at 25 Degrees C | Std. Units | 7.5 | 7.6 | 1 | 2 | H3 |

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

QUALIFIERS

Project: Bailly Assessment
Pace Project No.: 50345179

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

- C0 Result confirmed by second analysis.
- E Analyte concentration exceeded the calibration range. The reported result is estimated.
- H3 Sample was received or analysis requested beyond the recognized method holding time.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- P6 Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.
- PL The minimum mass of dried residue of 2.5 mg could not be obtained using the routine sample volume of 100 mL.
- R1 RPD value was outside control limits.

RE: Project: Bailly Assessment
Pace Project No.: 50345176

Dear Mr. Haskins:

Enclosed are the analytical results for sample(s) received by the laboratory between May 18, 2023 and June 03, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:
• Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tina Sayer

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
 without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50345176

Method: EPA 903.1

Description: 903.1 Radium 226

Client: NiSource_WSP Golder

Date: July 06, 2023

General Information:

39 samples were analyzed for EPA 903.1 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50345176

Method: EPA 904.0

Description: 904.0 Radium 228

Client: NiSource_WSP Golder

Date: July 06, 2023

General Information:

39 samples were analyzed for EPA 904.0 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50345176

Method: Total Radium Calculation

Description: Total Radium 228+226

Client: NiSource_WSP Golder

Date: July 06, 2023

General Information:

35 samples were analyzed for Total Radium Calculation by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: Bailly Assessment

Pace Project No.: 50345176

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Bailly Assessment
Pace Project No.: 50359718

Dear Mr. Haskins:

Enclosed are the analytical results for sample(s) received by the laboratory between November 15, 2023 and December 01, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:
• Pace Analytical Services - Indianapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tina Sayer

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
 without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50359718

Method: EPA 9056
Description: 9056 IC Anions
Client: NiSource_WSP Golder
Date: December 15, 2023

General Information:

35 samples were analyzed for EPA 9056 by Pace Analytical Services Indianapolis. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 765155

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 50359951001

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

- MS (Lab ID: 3506642)
 - Sulfate
- MSD (Lab ID: 3506643)
 - Sulfate

QC Batch: 766566

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 50359992003,50359992009

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

- MS (Lab ID: 3512181)
 - Sulfate

QC Batch: 766571

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 50360317002,50360317012

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

- MS (Lab ID: 3512190)
 - Sulfate

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50359718

Method: EPA 6010
Description: 6010 MET ICP
Client: NiSource_WSP Golder
Date: December 15, 2023

General Information:

35 samples were analyzed for EPA 6010 by Pace Analytical Services Indianapolis. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 764447

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 50359957003

P6: Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

- MS (Lab ID: 3503968)
 - Calcium
- MSD (Lab ID: 3503969)
 - Calcium

QC Batch: 765708

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 50360538003,50360614003

P6: Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

QUALIFIERS

Project: Bailly Assessment
Pace Project No.: 50359718

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

- 1d The closing CRDL recovery exceeded acceptance limits (191% recovery). MTM 12/9/23
- 3d The closing CRDL recovery exceeded acceptance limits (35% recovery) ELK 12/05/23
- C0 Result confirmed by second analysis.
- E Analyte concentration exceeded the calibration range. The reported result is estimated.
- H3 Sample was received or analysis requested beyond the recognized method holding time.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- P6 Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.
- PL The minimum mass of dried residue of 2.5 mg could not be obtained using the routine sample volume of 100 mL.

RE: Project: Bailly Assessment
Pace Project No.: 50359719

Dear Mr. Haskins:

Enclosed are the analytical results for sample(s) received by the laboratory between November 15, 2023 and December 01, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:
• Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tina Sayer
tina.sayer@pacelabs.com

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
 without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50359719

Method: EPA 903.1
Description: 903.1 Radium 226
Client: NiSource_WSP Golder
Date: December 22, 2023

General Information:

39 samples were analyzed for EPA 903.1 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50359719

Method: EPA 904.0

Description: 904.0 Radium 228

Client: NiSource_WSP Golder

Date: December 22, 2023

General Information:

39 samples were analyzed for EPA 904.0 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: Bailly Assessment
Pace Project No.: 50359719

Method: Total Radium Calculation

Description: Total Radium 228+226

Client: NiSource_WSP Golder

Date: December 22, 2023

General Information:

35 samples were analyzed for Total Radium Calculation by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALITY CONTROL - RADIOCHEMISTRY

Project: Bailly Assessment

Pace Project No.: 50359719

QC Batch: 633513

Analysis Method: EPA 903.1

QC Batch Method: EPA 903.1

Analysis Description: 903.1 Radium-226

Laboratory:

Pace Analytical Services - Greensburg

Associated Lab Samples: 50360284001, 50360284002, 50360284003

METHOD BLANK: 3088468

Matrix: Water

Associated Lab Samples: 50360284001, 50360284002, 50360284003

| Parameter | Act ± Unc (MDC) Carr Trac | Units | Analyzed | Qualifiers |
|------------|----------------------------------|-------|----------------|------------|
| Radium-226 | 0.219 ± 0.229 (0.323) C:NA T:85% | pCi/L | 12/19/23 12:31 | |

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

QUALITY CONTROL - RADIOCHEMISTRY

Project: Bailly Assessment

Pace Project No.: 50359719

QC Batch: 633515

Analysis Method: EPA 904.0

QC Batch Method: EPA 904.0

Analysis Description: 904.0 Radium 228

Laboratory:

Pace Analytical Services - Greensburg

Associated Lab Samples: 50360284001, 50360284002, 50360284003

METHOD BLANK: 3088473

Matrix: Water

Associated Lab Samples: 50360284001, 50360284002, 50360284003

| Parameter | Act ± Unc (MDC) Carr Trac | Units | Analyzed | Qualifiers |
|------------|-----------------------------------|-------|----------------|------------|
| Radium-228 | 0.517 ± 0.300 (0.541) C:94% T:87% | pCi/L | 12/13/23 14:12 | |

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

QUALIFIERS

Project: Bailly Assessment
Pace Project No.: 50359719

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

CHAIN-OF-CUSTODY / Analytical Request Document

The Chain-of-Custody is a LEGAL DOCUMENT. All relevant fields must be completed accurately.

Section A

Required Client Information:

Company: NiSource WSP
Address: 670 North Commercial Street
Manchester, NH 03101
Email: Thomas.Haskins@golder.com
Phone: (603)782-2433 | Fax
Requested Due Date: 10 day TAT

Section B

Required Project Information:

Report To: Tom Haskins
Copy To: Danielle Sylvia, Gabe Dixon
Purchase Order #: PO42408
Project Name: Bailly Assessment
Project #: 3406779.012

Section C

Invoice Information:

Attention: Jeff Loewe U126177
Company Name: NiSource
Address:
Pace Quote:
Pace Project Manager: tina.sayer@pacelabs.com,

**2023 Data Usability Summary
Report**

Data Usability Summary Report 2023 Groundwater Samples

This Data Usability Summary Report (DUSR) presents the findings of the data quality assessment performed on the analyses of groundwater samples collected for two (2) semi-annual sampling events, conducted between May 17th and June 2nd, 2023 and between November 14th and 30th, 2023 at the Bailly Generating Station. Samples reported in laboratory sample delivery groups (SDGs) listed in Table 1 were reviewed as part of this DUSR.

The samples were submitted Pace Analytical Laboratories located in Indianapolis, IN and Greensburg, PA to perform requested analyses. Information regarding the sample point identifications, analytical parameters, quality control (QC) samples, sampling dates, and laboratory SDG designations are summarized in Table 1.

Groundwater samples were analyzed following methods:

- Target Compound List (TCL) Total Metals following USEPA SW-846 Method 6020A, Inductively Coupled Plasma-Mass Spectrometry, February 2007 and USEPA SW-846 Method 6010C Inductively Coupled Plasma- Atomic Emission Spectrometry Revision 3 (November 2000);
- Mercury following USEPA SW846 7470A Mercury in Liquid Wastes (Manual Cold- Vapor Technique) Revision 1 (September 1994);
- Anions (chloride, fluoride, and sulfate) following USEPA SW846 9056A Determination of Inorganic Anions by Ion Chromatography Revision 1 (February 2007);
- Total Dissolved Solids (TDS) following SM 2540C Total Dissolved Solids Dried at 180 °C, Standard Methods 20th Edition (1998);
- pH by SM 4500-H+B pH in Water by Potentiometry; and,
- Radium-226 and Radium-228 following USEPA SW846 Method 903.1 Radium-226 in Drinking Water Radon Emanation Technique (January 1980) and USEPA SW846 Method 904.0 Radium-228 in Drinking Water (January 1980), respectively.

A total of 58 groundwater samples, as well as 6 field blanks, 6 field duplicates, and 4 matrix spikes/matrix spike duplicates (MS/MSDs) were collected and analyzed during the two semi-annual events.

The data quality assessment of inorganic results was performed in accordance with the Quality Assurance Project Plan (QAPP) and EPA Contract Laboratory Program (CLP) National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017) (Inorganic Guidelines) and the Evaluation of Radiochemistry Data Usability- Department of Energy (DOE, 1997) (Guidelines), where applicable to the methods listed above. If there was a conflict between the Guidelines and the analytical methodology, method specific criteria and professional judgment were used.

In general, chemical results for the samples collected at the Site were qualified based on outlying accuracy, precision, and analytical holding time exceedances. The following definitions provide brief explanations of the qualifiers which may have been assigned to data during the data validation process.

- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample and may be considered biased high.
- J- The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample and may be considered biased low.

- U The analyte was analyzed for but was not detected above the reported sample quantitation limit.
- UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

In general, the data generated as part of the groundwater sampling event met the QC criteria established in the respective methods and the Inorganic Guidelines. Table 2 summarizes all qualifications applied to the data, with applicable qualifier codes. Certain samples may have been qualified for multiple data quality assessment (DQA) findings, as shown in Table 2. The following bulleted items highlight qualifications to specific parameters and/or samples:

- Laboratory analyzed pH samples were analyzed outside of method holding time. All laboratory measured pH values were qualified as estimated (J). Field measured pH values were used in all data evaluations.
- The arsenic result for sample GAMW-22B-112023 was qualified as non-detect (U) at the reporting limit due to field blank contamination.
- The barium results for samples GAMW-06-051823, GAMW-07-051823, GAMW-08-051823, GAMW-23-060223, GAMW-22-112023, and GAMW-16-112023 were qualified as estimated and potentially biased high (J+) due to field blank contamination.
- The cadmium results for samples MW-105-052423, MW-112-052423, GAMW-17-052423, and GAMW-17B-052423 were qualified as non-detect (U) at the reporting limit due to field blank contamination.
- The chloride results for samples GAMW-11B-052223 and FD-01-052223 were qualified as estimated (J) due to a field duplicate relative percent difference outside of quality control limits.
- The chromium results for samples MW-105-052423, MW-112-052423, GAMW-17-052423, GAMW-17B-052423, GAMW-23B-060223, GAMW-08B-111623, GAMW-14-111623, GAMW-13-111623, GAMW-06-111623, GAMW-10-111623, GAMW-07-111623, FD-02-111623, GAMW-16-112023, GAMW-17-112823, and GAMW-17B-112823 were qualified as non-detect (U) at the reporting limit due to field blank contamination.
- The lead results for samples MW-105-052423, GAMW-17-052423, GAMW-17B-052423, GAMW-23-060223, GAMW-23B-060223, GAMW-08B-111623, GAMW-22-112023, GAMW-22B-112023, GAMW-16-112023, GAMW-17-112823, and GAMW-17B-112823 were qualified as non-detect (U) at the reporting limit due to field blank contamination.
- The sulfate results for samples GAMW-11B-052223 and FD-01-052223 were qualified as estimated (J) due to field blank contamination.
- The radium-228 results for samples GAMW-12R-112923 and FD-03-112923 were qualified as estimated (J) due to a field duplicate relative percent difference above quality control limits.
- The radium-228 and associated total radium results for samples GAMW-11-112723 and GAMW-11C-112723 were qualified as estimated and non-detect (UJ) due to MS/MSD percent recoveries below quality control limits.
- The radium-228 result for sample GAMW-11B-112723 was qualified as estimated and potentially biased low (J-), and the associated total radium result was qualified as estimated and non-detect (UJ) due to MS/MSD percent recoveries below quality control limits.

- The radium-228 and associated total radium results for samples GAMW-21-060123, GAMW-22-060123, GAMW-23-060223 were qualified as estimated and non-detect (UJ) due to an MSD percent recovery below quality control limits.
- The radium-228 results for samples GAMW-22B-060123 and GAMW-23B-060223 were qualified as estimated and potentially biased low (J-), and the associated total radium results were qualified as estimated and non-detect (UJ) due to an MSD percent recovery below quality control limits.

Dilutions do not require qualifications based on the Guidelines. Detection and reporting limits of non-detect compounds are elevated proportional to the dilution when undiluted sample results are not provided by the laboratory. The data usability of diluted results was evaluated by the data user in the context of statewide characterization.

Based on the data validations and data quality assessment, 100% of the analytical data for samples collected at the Site were determined to be acceptable (including estimated data) for their intended use.

TABLE 2

Qualifier Summary Table
NIPSCO CCR Groundwater Monitoring - Bailly Generating Station

| Laboratory SDG | Sample Name | Constituent | New Result | New RL | Qualifier | Reason |
|-----------------------|--------------------|--------------------|-------------------|---------------|------------------|---|
| 50359724 | GAMW-11-112723 | Total Radium | - | - | UJ | MS/MSD % recovery below QC limit |
| 50359725 | GAMW-11B-112723 | Total Radium | - | - | UJ | MS/MSD % recovery below QC limit |
| 50359726 | GAMW-11C-112723 | Total Radium | - | - | UJ | MS/MSD % recovery below QC limit |
| All SDGs | All Samples | - | - | - | - | Laboratory applied U-qualifiers indicating non-detect results and J-qualifiers indicating estimated results below the reporting limit are retained unless other qualification is indicated in this table. All other qualifiers are removed. |

Abbreviations:

RL: Reporting Limit

QC: Quality Control

RPD: Relative percent difference

MS/MSD: Matrix

Spike/Matrix Spike Duplicate

Qualifier Definitions:

J: Estimated Result

U: Non-detect Result

J+: Estimated and

potentially biased high result

UJ: Estimated and non-detect result

J-: Estimated and potentially biased low result
