R. M. Schahfer Generating Station – MSRB, MCWB and DA (collectively the CCR Unit)
Wheatfield, Indiana

Certification of CCR Assessment of Corrective Measures Report - Addendum
40 CFR §257.96 & Corresponding Regulations under Indiana Administrative Code

I have personally reviewed this Addendum to the assessment of corrective measures (ACM) report, the subject of which is three impoundments (the Material Storage Runoff Basin (MSRB), Metal Cleaning Waste Basin (MCWB), and Drying Area (DA)), which are collectively referred to as the CCR Unit, at the NIPSCO R. M. Schahfer Generating Station, prepared by Golder Associates Inc. and dated November 2020. Based on an inquiry of those individuals immediately responsible and on supporting data that I understand to be true, accurate, and complete, I verify the information in this Addendum to the ACM Report is accurate and meets the applicable requirements of the CCR Final Rule. In consideration of the above, I certify to the best of my knowledge, information, and belief, that the Addendum to the ACM Report for the regulated CCR management unit referred to as the CCR Unit has been prepared and meets the applicable requirements of 40 CFR §257.96 and corresponding State of Indiana requirements.
