STANDARDS

In order to qualify for this tariff, the Customer shall meet the following standards:

1. The installation of all energy efficiency measures that are needed to develop a 25% reduction in the estimated annual energy heating and cooling cost for residences and other applicable structures within this tariff when compared to an identified baseline. The baselines for new and existing structures are composed of building performance characteristics representing current and existing typical building practices as determined by field surveys. A new structure is defined as having physical construction started after January 1, 1991. An existing structure is defined as having physical construction started prior to January 1, 1991.
2. The Company accepted heat pump shall have the following characteristic:

A minimum Seasonal Energy Efficiency Ratio (SEER) as stated below. The Seasonal Energy Efficiency Ratio is the total cooling of a central unitary air conditioner or unitary heat pump in Btu's during its normal usage period or cooling divided by the total electric energy input in watt-hours during the same period.

<u>Dates of Installation of Heat Pump</u>	<u>Minimum SEER</u>
Prior to February 19, 1992	9.5
On or after February 19, 1992	10.0
